PROFILE

Full stack web developer with experience in startup environments and freelance projects, focused on building fast, clean and maintainable digital products. I work across the whole stack, from the database to the user interface, with a minimalist approach: no superfluous dependencies, lightweight architectures, code that scales without becoming complex. Currently employed remotely at Agrisense, where I develop the IoT web platform for agricultural devices with Next.js, React and Supabase. I contribute actively to open source and have experience with private clients across different technical domains.

EXPERIENCE

Agrisense

Feb 2026 – Present · Remote

Full Stack Developer

- Development and maintenance of the web platform for agricultural IoT devices, used by farmers for real-time crop monitoring and management.
- Responsible for the entire stack: API architecture with **Supabase** (authentication, PostgreSQL database, realtime), front end with **Next.js** and **React**.
- Design of interfaces optimized for rural contexts: data clarity, accessibility and stability even under limited connectivity.
- Implementation of best practices for security, performance and scalability within an agile team.

Breakout Schematics: TradingView Indicator

Mar 2026 · Remote · Private client

Pine Script Developer · commissioned work

- Commissioned development of an advanced TradingView indicator that automatically detects high-probability breakout patterns (SSA, S1, MUT) through an architecture of independent state machines.
- Tracks a configurable consolidation session (default: Asian session), locks the reference levels at close and monitors every candle for structured patterns with precise pip thresholds.
- Signal rendering with labels, triangular markers and native alert support; compatible with every timeframe and instrument (Forex, indices, commodities).

Social Media Manager

2021 – 2022 · Ostuni (IT)

Local company · social channel management and content production

- Direction and production of all visual content: video, photography and promotional graphics.
- Definition of the editorial calendar and publishing strategy to maximize reach and engagement.

Freelance · Sartoria Il Baco

Late 2019 · Ostuni (IT)

Web Designer & Developer

- Design and development of a single-page site with an "illustrated/cartoon" style built with **React** and custom CSS; UI prototyping in **Figma**.

SELECTED PROJECTS

TeleVault

2025 · github.com/elpideus/TeleVault

Self-hosted cloud storage on Telegram infrastructure

- Open source application that turns Telegram into a personal cloud vault: upload, download and organization of files using the Telegram servers as free storage.
- Direct integration of the Telegram APIs (MTPROTO), chunking for large files and a web interface for browsing the content.

PeakPlay

2025 · github.com/elpideus/peakplay

- Open source project available on GitHub, developed with attention to performance and to the simplicity of the architecture.

tgbiofy · Telegram / Spotify Integration

2021 · github.com/elpideus/tgbiofy

- Python script that automatically updates the Telegram bio, photo and name with the track currently playing on Spotify, through OAuth2 integration with both APIs.

TECHNICAL SKILLS

Front end

TypeScript JavaScript ES6+

React Next.js Qwik

HTML5 SCSS / CSS

Back end & data

Node.js Bun Supabase

MySQL Prisma REST API

Tools

Git / GitHub Linux Figma

FFmpeg Pine Script

Design & media

Photoshop Premiere Pro

After Effects DaVinci Resolve

EDUCATION

Scientific High School Diploma

2019 – 2022

Liceo "L. Pepe – A. Calamo", Ostuni

Scientific studies and computer science

Technical Institute

2017 – 2019

Pantanelli-Monnet, Ostuni

Technical and commercial IT disciplines

OTHER

- Active contributor to **open source** projects
- Fluent in **Italian**, **English** and **Romanian**
- Oriented towards **remote work** and distributed teams
